

# Passive House Training

Published 03-Jun-19 by [Ian Scholten](#)

## From website:

In this 3-day workshop, you will gain a solid understanding of advanced Passive House construction techniques. Through hands on activities with actual Passive House assemblies, materials, and equipment, you will develop the skills necessary to construct high performance, energy efficient homes.

In-class lessons will be complemented with hands-on exercises at workstations comprising Passive House construction mock-ups. The focus will be on principles, onsite considerations, and practical experience. The knowledge you gain will fundamentally change how you approach construction. You will also be recognized as an innovative tradesperson uniquely set apart as a champion in the industry.

This course is a collaboration between [Quantum Passivhaus](#), [MIZU Passive House Consulting](#), [Point Engineering](#) and [Peel Passive House Consulting](#). Also we would like to recognize [Iohahi:io Akwasasne Education and Training Institute](#) for providing the space for us to conduct this workshop, and thank all our sponsors for their invaluable support and generous contributions: Siga Canada, ProClima Canada (475 High Performance Building Supplies), and Partel.
