

# Canadian Renewable Energy Association - Multiple Opportunities

Published 24-Aug-21 by [Phil McKay](#)

The Canadian Renewable Energy Association (CanREA) works to ensure that wind energy, solar energy and energy storage play a central role in transforming Canada's energy mix, leveraging the synergies among these technologies to provide clean, flexible, and affordable energy solutions. We are dedicated to creating a more sustainable future for Canada and future generations.

CanREA has created a structure for our members working in the field of wind, solar, and energy-storage operations. The Operations Caucus is a forum for professionals working in construction, installation, operations & maintenance, manufacturing, supply chain, etc. to come together for discussion and resource development for the benefit of the renewable-energy industry in Canada. Within the Caucus are five Committees, including the Workforce Development and Environment, Health & Safety Committees. As wind, solar and energy storage become more prevalent in Canada and our membership grows, there is a need to progress the work of these Committees to address important issues for the growth and ongoing development of the workers operating assets and supporting those operations.

Three unique positions have been posted. All interested individuals are encouraged to follow the links to find the full description, qualifications, and terms of these positions as well as the application process:

- **Workforce Development Project Coordinator:**

- <https://renewablesassociation.ca/renewable-energy-workforce-development-project-coordinator/>

- CanREA is seeking a 30 hour per week, temporary employee through the Electricity Human Resources Canada (EHRC) "[Discovering Potential](#)" program. The Renewable Energy Workforce Development Project Coordinator will coordinate renewable energy workforce development projects and working groups. Working with the Sr. Director, Operations, the position requires some education and experience in workforce and human relations concepts and a strong interest in renewable-energy operations.

- **Environment, Health, & Safety Project Coordinator:**

- <https://renewablesassociation.ca/canadian-renewable-energy-association-renewable-energy-health-and-safety-project-coordinator/>

- CanREA is seeking a 30 hour per week, temporary employee through the Electricity Human Resources Canada (EHRC) “[Discovering Potential](#)” program. The Renewable Energy Health and Safety Project Coordinator will coordinate renewable energy health and safety projects and working groups. Working with the Sr. Director, Operations, the position requires some education and experience in workforce safety concepts and a strong interest in renewable-energy operations.
- **Ergonomics Internship:** <https://renewablesassociation.ca/careers/canadian-renewable-energy-association-wind-turbine-technician-ergonomics-internship/>
  - The CanREA Human Factors Working Group is looking to establish a long-term approach to Human Factors (HF) resource development for wind energy, solar energy, and energy-storage system operations. To support this work, CanREA is looking to hire a short-term intern position capable of assisting in the drafting of new resources in the specific area of wind turbine technician ergonomics. This role is a direct hire by the Canadian Renewable Energy Association and is supported by the Electricity Human Resources Canada (EHRC) “[Empowering Futures](#)” program.

Please follow the links for contact information for each position.
