

Exciting R&D student work opportunities at the National Research Council for winter 2023

Published 16 days ago by [Karine Lacoste](#)

Are you an undergraduate student enrolled in a science or engineering program? Are you looking for a friendly work term environment for next semester where you could contribute to the development of new technologies to address climate change? The National Research Council's (NRC) might just have what you are looking for!

The NRC is offering several exciting R&D student full-time work opportunities for the upcoming winter 2023 at its Construction Research Centre, at its Energy, Mining and Environment Research Centre, and at its Ocean, Coastal, and River Engineering Research Centre. Opportunities are offered in various locations such as St. John's, Montreal, Ottawa, Mississauga and Vancouver, as well as virtually.

Interested? Apply to NRC's [Student Employment Program](#) **before October 3rd** and make sure to insert the keyword #ICE-W2023 in your resume and cover letter.
