

Clean Energy 101

Version 2

Published 02-Oct-18 by [Ian Scholten](#) Last updated 15-Jan-19 3:46 PM by [Bonnie Van Tassel](#)

The clean energy opportunities are abundant from renewable energies like [solar](#), [wind](#), [hydro](#), and more to energy efficiency upgrades to the increasingly available opportunities of energy storage, district energy, electric vehicles, and more.

This set of pages has been created to provide an introduction to these opportunities to help you understand what the opportunity is, how it works, and how to assess if it's a good fit with your community's needs (at a high level).

We've begun with information about [wind](#), [solar](#), and [hydro](#). Over time, we'll add more pages about different clean energy opportunities. We're also working to add two-pagers about each opportunity that you can download to share with others in your community or elsewhere.

Feel free to add questions or comments to the pages, or reach out to [Ian Scholten](#)
